North Coast Bearings markets and distributes differential rebuild kits, transmission rebuild kits and related products to the heavy, medium and light duty aftermarkets under the DT Components[®] product line. The brand was created through a strategic alliance with The Timken Company.

Over 2,500 Different Rebuild Kits

After more than fifteen years of success, Timken and North Coast Bearings have extended their strategic alliance to continue providing customers outstanding value into the future.

Our continually growing product line includes rebuild kits for the broadest range of on highway vehicles along with complementing gearing, axle shafts, u-joints and related products. Please visit our website for the latest news, information and literature on all of the North Coast Bearings products.

DT Components is the most recognized and respected brand of differential and transmission rebuild kits in North America. Our mission is to provide the best value in differential and transmission kits and components. Best value means Timken[®] tapered roller bearings, the best order fill, the fastest in-house turn-around time, US manufacturers' product where available, superior quality and personalized service.

North Coast Bearings is a member of the Bearingtech family of companies. These include:

- Bearing Technologies – Engineers and manufactures OEM quality wheel end products and OEM center support bearings,
- Micron Metalworks – Machining division for automotive wheel end products,
- Precision – Provider of competitively priced line of quality hub assemblies, bearings, seals and related products to automotive warehouse distributors.

North Coast Bearings services our customers from our 110,000 square foot Avon, Ohio facility along with a distribution center in Sparks, Nevada. The DT Components brand of kits are also available from additional Timken distribution centers throughout the world.

Henry Timken once said “The man who could devise something that would reduce friction fundamentally would achieve something of real value to the world”.

Henry Timken

That basic concept led to the invention and patenting of the tapered roller bearing in 1898 and the formation of The Timken Roller Bearing and Axle Company in 1899.

Throughout the 20th Century....

...the name Timken has been synonymous with quality. The Timken commitment to innovation and performance has more than 100 years of manufacturing excellence to back it up. The Timken Company is a world leader in anti-friction technology and continues to supply bearings, steel, components and engineering solutions to the industries of the world.

Today, The Timken Company (NYSE: TKR) is a leading international manufacturer of highly engineered bearings, alloy and specialty steels and components, and a provider of related products and services.

Performance Legacy

Nowhere is the performance and technology delivered by the Timken brand more evident than on the racing circuits of the world. Motor racing – born of one man’s quest to build a better, faster machine than another man’s – continues today to provide some of the most informative engineering feedback and serves as comprehensive demonstration of Timken’s products performance. From the local dirt tracks

where weekend warriors race their homemade machines to the world stage and the premier open-wheel series, nothing puts Timken’s products and services to the test like motor racing. Timken® bearings reduce friction in the wheels, axles, turbochargers, gearboxes and drivelines, while Timken steel carries the load in crankshafts, camshafts, connecting rods, engine fasteners, gearbox components and brake systems.

And what The Timken Company learns at the track contributes to what goes into the products they make for heavy construction equipment, rolling mills, disc drives and jet engines – all relying on the Timken commitment to performance. Millions of machine hours are logged and millions of miles are traveled on their bearings, steel and components every year.

In Motor Racing...

... more major racing series championships are won with cars that rely on Timken products than all of their competitors’ brands put together. That sends a strong message about the quality, performance and teamwork within the Timken organization.

This catalog is divided into 7 main sections

- 1. Heavy Duty Differentials**
- 2. Heavy Duty Transmissions and Transfer Cases**
- 3. Light Duty Differentials**
- 4. Light Duty Transmissions**
- 5. Light Duty Transfer Cases**
- 6. Rebuild Kit Bill Of Materials**
- 7. Driveshaft, Wheel End Products, Interchanges and Misc. Products**

The Indexes for Heavy Duty Differentials, Transmissions and Transfer Cases are divided by the unit manufacturer and model number. Unless noted under the comments column, the rebuild kit services all ratios and variations for the model listed.

The Indexes for Light Duty Differentials, Transmissions and Transfer Cases are divided by vehicle manufacturer and model number/axle size. Make sure you have the correct date the vehicle was manufactured. Most models have evolved over time and there may be several kits for your particular vehicle depending upon when it was made.

Common Light Duty Differentials have their own product page by model number / axle size that lists gearing and other related products that are available.

We have also reprinted product information from our vendors with their permission on Heavy Duty Axles, Heavy Duty Differentials, Light Duty Limited Slip and Locking Differentials and Light Duty Transfer Cases for your convenience.

All Kit Bill Of Materials are grouped together into one section and are listed in numeric sequence.

What's new in this catalog.

The DT2012 catalog provides rebuild kits and products for the most current models and vehicles. While the updates and additions are too numerous to list, below are highlights of some of the new items in this catalog.

- Rebuild kits for the Alliance/Freightliner -2 and -4 series of single and tandem axles.
- Rebuild kits for 2008 and newer Dana 40, 404 and 405 axles.
- Overhaul kits for Eaton/Fuller transmissions with input shafts and sliding clutches.
- Clutch installation kits for common FR and RT Eaton/Fuller transmissions.
- Rebuild kits for 2007 and newer Ford 8.8" and 9.75" axles.
- Rebuild kits and gearing for Dodge/Freightliner Sprinter axles.
- Rebuild kits for Chevy Camaro and Nissan Titan axles.
- Broader coverage for heavy and light duty axle shafts.
- Updated application information for Auburn Gear and Eaton/Detroit Locker differentials.
- Expanded coverage on driveshaft center support bearings.
- New automotive and heavy duty Timken®TechTips.

Please link to our electronic catalog through the DT Components website for the most current product listings and additional product lookups by vehicle.

Pages 311 through 320, 330 through 339 provided by The Timken Company.

Every possible effort has been made to ensure that the data in this catalog is correct, but we cannot assume responsibility should there be any error.

References to original equipment part numbers are for cross reference and identification purposes and may not indicate that the actual part is an original equipment part.

Warning

Follow the manufacturer's installation instructions. Never spin a bearing with compressed air. The rollers may be forcefully expelled, creating a risk of bodily harm. Failure to follow all instructions and to properly lubricate the bearing can cause equipment failure, creating a risk of serious bodily harm.

Heavy & Medium Duty Differential Products

- Bearing & Seal Rebuild Kits
- Tractech No Spin Differentials
- Axle Shafts
- Permatex® Adhesives & Sealants
- Individual Bearings & Seals
- Coverage for all Dana/Eaton, GMC, IH/Navistar, Mack, Meritor/Rockwell, Volvo & White Models

Heavy & Medium Duty Transmission & Transfer Case Products

- Bearing & Seal Rebuild Kits
- Permatex® Adhesives & Sealants
- Individual Bearings & Seals
- Coverage for all Clark, Eaton/Fuller, Fabco, Mack, Meritor/Rockwell, New Process, Spicer/TTC & ZF Models

Light Duty Differential Products

- Bearing & Seal Rebuild Kits
- Ring & Pinion Sets
- Differential Cases & Internal Kits
- Auburn, Detroit Locker & Eaton Limited Slip & Locking Differentials
- Axle Shafts
- Axle Shaft Repair Bearings
- Permatex[®] Adhesives & Sealants
- Individual Bearings & Seals
- Coverage for all AMC, Chrysler, Ford, GM, Jeep & Toyota Vehicles

Light Duty Transmission & Transfer Case Products

- Bearing & Seal Rebuild Kits
- Synchronizer Rings & Assemblies
- Input Shafts & Counter Shafts
- Transfer Case & Automatic Transmission Chains
- Permatex[®] Adhesives & Sealants
- Individual Bearings & Seals
- Coverage for all Acura, AMC, Chrysler, Ford, GM, Honda, Hummer, Hyundai, Infiniti, Isuzu, Jeep, KIA, Lexus, Mazda, Mitsubishi, Nissan, Saturn, Suzuki & Toyota Vehicles

Driveline & Clutch Products

- Driveshaft Center Support Bearings
- Universal Joints
- CV Driveshafts
- Clutch Release Bearings
- Pilot Bearings
- EZ Sleeves[®]
- Individual Bearings & Seals
- Coverage for all Acura, AMC, Chrysler, Ford, GM, Honda, Hummer, Hyundai, Infiniti, Isuzu, Jeep, KIA, Lexus, Mazda, Mitsubishi, Nissan, Saturn, Suzuki, Volkswagen & Toyota Vehicles & Agricultural Applications

Heavy Duty, Light Truck & Automotive Wheel End Products

- Wheel Bearings & Sets
- Hand Installed Wheel Seals
- ABS & Non-ABS Hub Assemblies
- Axle Bearings, Axle Repair Bearings & Spindle Bearings
- Axle Seals & Wheel Seals

While this catalog is as current as possible at the time it was printed, it is quickly outdated due to our continued efforts of adding rebuild kits and related products for additional models and newer vehicles.

We also offer many additional products such as axle bearings, wheel hub assemblies, wheel seals, clutch release bearings, automatic transmission and engine seals that are not contained in this catalog.

Our E-Catalog also contains images and specifications on many of our products along with over 330,000 part number interchanges.

Please access our E-catalog via www.dtcomponents.com to look up information on these additional products and for models and years not included in this catalog.

Meritor/Rockwell Axle Identification

Nominal Axle Load Rating (GAWR):

In thousands of pounds. Individual forward and rear axles of a tandem set (**D, N, P, R**) are rated as single axles. A tandem set (**T**) is rated as the combination of the two axles and a tridem set (**Z**) as the combination of the three axles.

Manufacturing Location

A - Australia
B - Brazil
C - India
D - Mexico (Dirona)
E - Europe (C.V.C.)
M - Europe (Maudslay)
N - U.S.A.

Brake Type

C - Dura-Master[®] Air Disc Brake
D - RDA Stopmaster[®] Wedge Brake (Dual Air Chambers)
E - RDH Stopmaster[®] Wedge Brake (Dual Hydraulic Cylinders)
F - RSH Stopmaster[®] Wedge Brake (Single Hydraulic Cylinder)
L - Q Plus Cam Brake
N - None
P - Cam-Master[®] "P" Series Cam Brake
Q - Cam-Master[®] "Q" Series Cam Brake
S - RSA Stopmaster[®] Wedge Brake (Single Air Chamber)
T - Cam-Master[®] "T" Series Cam Brake
W - Cam-Master[®] "W" Series Cam Brake

Hub Type

A - Aluminum
F - Ferrous
N - None

Gearing Type

1 - Single Speed
2 - Two Speed
3 - Helical Double Reduction
4 - Salisbury Single Speed
5 - Planetary Double Reduction
6 - Hub Reduction

Main Differential Nest Type

B - Special Differential
C - Driver Controlled Differential Lock
F - Standard Differential
H - High Traction[®] Differential
N - NoSPIN[™] Differential

RR 20 1 4 5 N C Q F 123

Axle Specification Number

Identifies specific customer axle configurations (variations from the original axle design). For information about the variation, see the Bill of Materials for that specific axle model.

Axle Type

C - Single Rear Drive Axle, Coach
D - Forward-Rear Axle of a Drive Tandem with Inter-Axle Differential
N - Forward-Rear Axle of a Drive Tandem or Tridem without Inter-Axle Differential
P - Forward-Rear Axle of a Drive Tandem with Inter-Axle Differential and Pump
R - Rear-Rear Axle of a Drive Tandem
S - Single Rear Drive Axle
T - Tandem Drive Axle Set
Z - Tridem Drive Axle Set

Carrier Type

Carrier size. Large numbers indicate a higher GCW rated carrier; i.e., larger ring gear, etc.

Axle Design Variation

Indicates axle design level or variation, (e.g., RS 23 161 has a thicker wall housing than the RS 23 160). For information, see the Bill of Materials for that specific axle model.

SPECIAL AXLES & SHAFTS

Our Modern equipment and facilities enable us to produce all types of shafts for Trucks and Tractors as well as for other innumerable uses. Submit your drawings and specifications, and quotations will be promptly forwarded.

GENERAL INFORMATION

Our axles and drive shafts are manufactured for the replacement trade. It is not intended to convey the thoughts that they are original shafts made by the truck or assembly manufacturer. They are sold for use in replacing broken or worn shafts and should be resold by the vendor for such purposes only. Vehicles or assembly manufacturers’ part numbers are used to aid in selection of our proper number.

AXLE-TYPES

The illustrations below classify the principal types of Axles listed in the Catalog. The symbols appear in the alphabetical listing in the column headed "Type and Number of Splines." The letter symbol identifies the type, and the numeral suffix the number of splines. Flanged axles, unless otherwise noted, are measured from inside of flange to end of spline.

TYPE B

TYPE K

TYPE F
INTERGRAL FLANGE

TYPE M
MF-Type M with Press-on Flange

TYPE R

TYPE O
Integral Flange

TYPE J
JF-Type with Press-on Flange

TYPE P

Type "T" same as Type "P", without lock key groove.

To Identify a Heavy Duty Axle Shaft... follow these time saving steps:

1 Look for Manufacturers Numbers.

They are stamped as shown with the following codes:

Foot = $\diamond F$ + 3 or 4 digit number

Eaton = 5 or 6 digit number

Rockwell = Letter + 4 digit number

If you are able to read these numbers clearly, phone your local **NCB** distributor listed below and give them the flange numbers to cross reference in

our catalog. The distributor can quickly give you the interchange number and cost.

2 If numbers are unavailable or illegible.

Measure diameter and count number of splines on shaft.

Measure diameter of bolt circle.

(Center of hole to center of hole on opposite side of flange.)

Count the number of straight and the number of tapered holes in flange.

Measure length of shaft from inside face of flange to end of spline.

Note whether flange is flat or dome shaped.

Note whether splines are straight or tapered.

3 With all the dimensions and information...

Refer to the **NCB** catalog for matching specifications or call your local **NCB** distributor listed below for assistance and availability. **One phone call is all it takes to cut your downtime.**

Transfer Case Index

Fabco

Fabco transfer cases are available with multiple combinations of the options for the particular model. Rebuild kits are for individual sections of the transfer case. You will need to purchase kits for each individual section that are applicable to your transfer case.

Model No.	Comments	Kit	Model No.	Comments	Kit
TC-170	Upper Shaft w/ PTO	TCRK-170A	TC-170PD	Upper Shaft w/ PTO	TCRK-170A
	Upper Shaft w/o PTO	TCRK-170A1		Upper Shaft w/o PTO	TCRK-170A1
	Intermediate Shaft w/ & w/o Lube Pump	TCRK-170B		Intermediate Shaft w/ & w/o Lube Pump	TCRK-170B
	Lower Shaft w/ Neutral	TCRK-170C		Lower Shaft w/ Proportional Differential	TCRK-170C2
	Lower Shaft w/o Neutral	TCRK-170C1			

Meritor/Rockwell

Rockwell transfer cases have sub model numbers that specify what options each transfer case are equipped with. Rebuild kits contain all of the bearings and seals for the particular sub model.

DT Differential Rebuild Kits are available in two levels of content

Standard Rebuild Kits Contain:

- Pinion Head & Tail Bearings
- Pinion Nose Bearing (where applicable)
- Differential Bearings
- Pinion Seal
- Pinion Nut
- Crush Sleeve or Shims to Set Pinion Bearings Pre-Load
- RTV Sealant for the Differential Cover
- Gear Marking Compound & Brush to Check Gear Tooth Contact Pattern

Master Rebuild Kits Contain:

- Everything in a Standard Rebuild Kit
- (A) Ring Gear Bolts
- (B) Pinion Adjusting Shims to Adjust Pinion Depth
- (C) Differential Shims to Adjust the Ring & Pinion Back Lash and Set Differential Bearings Pre-Load

Stackable differential shims are available as a kit upgrade on popular applications.

Axle Identification

Accurate axle identification is critical when ordering repair parts for rear axles in car, truck & SUV applications as well as for front axles used in four wheel drive truck & SUV applications. The axles used in each individual vehicle can vary based on vehicle options. For example, a typical GM ½-ton truck will be equipped with the GM 8.5" axle, but this same truck may be built with a larger GM 9.5" axle if optioned with a larger engine, heavy duty chassis or towing packages. Therefore, the axle must be identified by the vehicle owner or mechanic prior to ordering parts.

Vehicles can be equipped with either corporate axles (built by the vehicle manufacturer) or Dana axles. Corporate axles from Chrysler, Ford & GM are identified by the ring gear diameter and are frequently referred to as a "Ford 8.8" or "GM 8.5". Ford axles may have an identification tag that specifies ring gear diameter and ratio.

Most corporate axles can be easily identified by the bolt pattern on the differential cover when you have more than one axle option for your vehicle. The following illustrations show the typical bolt pattern for the common corporate axles. You may still need to measure the ring gear diameter in order to positively identify the corporate axle.

To Determine Ring Gear Diameter

you need to measure the outside diameter of the ring gear.

Dana axles are identified by model number. The model number (i.e. "44") is usually cast into the webbing of the axle center housing as shown in the illustration below.

Differential Application by Vehicle

(ch) custom housing with 3.25" bearing bore.							
(pa) 30 and 33 spline units are made to fit axles cut with 45 degree pressure angle.							
All GM 8.5"/8.6" Eaton differentials require special bearings. For axles with small bearing bores (race O.D. of 2.89"), usually found on vehicles prior to 1999, bearing LM102949 and race LM102911 are required. For axles with large bearing bores (race O.D. of 3.06"), usually found on vehicles from 1999 to present, bearing LM603049 and race LM603012 are required.

Circle Track Racing Applications

Ford 9" CTR only	1.32" 31	All exc. 2.72	R18703A
Ford 9" 2.00 Large Bearing	1.32" 31	All	R18715A (was R18707A)
Quick Change (Franklin, Halibrand, Richmond, Winters, etc.) CTR only	1.32" 31	All	R18705A (aluminum housing)

The Detroit Locker CTR (Circle Track Racing) version of the Detroit Locker is made exclusively for left hand turn racing only. Designed for use of asphalt or concrete tracks being ½ mile or larger.

INDEPENDENT TESTING OF DIFFERENTIALS

- check it out at EatonPerformance.com

Independent Testing Firm, National Technical Systems, tested a group of Eaton's differentials along with competitor's differentials. The baseline for testing was established using Eaton's differentials. All differentials were held to the same exact parameters during testing. According to the test results, NTS has determined,

"Eaton differentials outperformed the competitor's differentials nearly two to one."

NOTES

- (+) +4.56, 4.88 and 5.13 require some modification for install.
- (1) "dia. r.g." is the pitch diameter of the ring gear. "10 bolt" means number of bolts in the differential housing cover.
- (2) The axle shaft diameter is the "major diameter" measured over the splines at the outer end of the shaft.
- (3) "& up" after the ring gear/pinion ratio means that all numerically higher ratios, in addition to the one designated, are also accommodated.
"& dn" after the ratio means that all numerically lower ratios are accommodated.
- (4) A "letter" after the model indicates a two-piece differential support case is supplied by Eaton with the differential. All other models (no letter) fit the two-piece differential case supplied by the axle/vehicle manufacturer. Bolts, bearings, shims & gaskets are not supplied.
The "Detroit SofLocker" differential indicated by an "SL" in the model number (187SL16D), provides smooth and reduced noise operation in the drive-coast mode. A dampening device has been inserted into the inboard end of each side gear.
The "Detroit C-Locker" differential indicated by a "C" in the model number (187C149A), accommodates axles with C-Clip axle shaft retainers inside the differential.
- (5) Detroit Locker differentials should not be used in front-drive axles or light on-highway vehicles unless used with unlocking hubs that are fully unlocked on-highway.
- (6) Dana 61-1 FULL FLOAT 1.31" dia. r.g./30 axle spline:
3.31 & down ratios, use Detroit SofLocker 225SL19B
- 3.54, 3.73, 4.10 ratios, THIN RING GEAR with standard differential;
- | | | |
|-------------------------|--------------------|--------------------------------|
| Number on ring gear is: | 32503 = 3.54 ratio | |
| | 34508 = 3.73 ratio | Use Detroit SofLocker 225SL19C |
| | 30360 = 4.10 ratio | |
- 3.54, 3.73, 4.10 & 4.56 ratios, THICK RING GEAR with limited slip differential;
- | | | |
|-------------------------|--------------------|--------------------------------|
| Number on ring gear is: | 39211 = 3.54 ratio | |
| | 37875 = 3.73 ratio | Use Detroit SofLocker 225SL19A |
| | 39300 = 4.10 ratio | |
| | 39299 = 4.56 ratio | Use Detroit SofLocker 225SL19C |
- (7) Dana 70/70 HD, 35 splines: Use Detroit Locker 225S-18 if two piece case; use 225SL58 A, B, C, D if a one piece case.
- For Drag Racing applications:**
When using a Locker with trans brake - take the lash out of the Locker before pre-staging.

Made in the USA

Performance Differentials

Ected Max Lockers | Limited-Slip Differentials

Hook Up!

with AuburnGear

PERFORMANCE DIFFERENTIALS

Auburn Gear Products

Nothing delivers superior traction capability like an Auburn Gear performance differential!

For nearly 55 years, Auburn Gear has been the leader in performance limited-slip differentials.

Today, no matter what you drive—dragsters, performance cars, everyday passenger vehicles, light-duty trucks, vans, sport utilities, off-road or recreational vehicles—there is an Auburn Gear performance differential engineered to maximize your vehicle's tractive capability.

High Performance Limited-Slip Differentials

Street, track or muddy trail—Get smooth torque-sensing operation with the correct bias ratios to outperform the competition.

Pro Series Limited-Slip Differentials

Rev it up and pop the clutch! By design, the Pro Series gives you an even higher bias torque than Auburn's High-Performance models, with lightening-fast reaction to changing conditions for the very best in controlled power transfer.

The Auburn Gear Ected Max Selectable Locker

This is the only aftermarket locker that delivers on-the-go system engage! And it's the only one that offers both the traction control of a limited-slip differential and the capability of a true locker. All other aftermarket differentials must be operated in either the "open" differential mode or the "locked" mode. But not Ected Max!

Caution: Ected Max is a high-performance locker. Auburn Gear highly recommends upgrading to stronger ring and pinions and axles if you're thinking about installing an Ected Max on your vehicle. Engage Ected Max on the fly at any reasonable speed when all four wheels are on the ground.

D-REX

Best Warranty in the Industry

With Auburn Gear, you get a full one-year manufacturer's warranty, plus D-REX coverage for four years from date of purchase. D-REX stands for Differential-Replacement Exchange—which means Auburn Gear will replace your unit within the first four (4) years after purchase. Every part you get will be brand new. The unit comes assembled, tested, certified and ready for installation. No more rebuilding and mixing old worn parts with new parts!

Why Auburn Gear performance differentials?

Auburn Gear Pro Series and High Performance Series differentials provide superior performance through a unique cone-clutch design that transfers more power to the high-traction wheel for quick acceleration and tight cornering.

All Auburn Gear limited-slip differentials are designed to provide the maximum amount of torque transfer without compromising the performance requirements of the vehicle in situations where torque transfer is not required.

How does Auburn Gear's design work?

Torque transfer is achieved through the use of cone clutches coupled to beveled side gears. As torque is transmitted through the differential side gears to the axle shafts, the side-gear-separating forces and spring preload firmly seat the cones into the differential case.

The cone design, along with the applied force, determines the torque transfer capability of the differential. When torque levels decrease, as in a cornering maneuver, the gear-separating forces also decrease, allowing the axle shafts to rotate independently. This unequally divides the torque between the two wheels, delivering more torque (or bias torque) to the wheel with the most traction.

Get Limited-Slip Plus the Power of a True Locker

Ected | Electronically Controlled Traction Enhancing Differential (*pronounced "ek-ted"*)

The Ected Max is a revolutionary traction-technology product that provides you with a selectable limited-slip or locker mode. When selected "off" — the Ected Max functions as a performance limited-slip differential for on- and off-road excitement. When selected "on" the Ected Max becomes a locker, ideal for the quarter-mile or the nastiest off-road terrain.

How does the Ected Max work?

The Ected Max is a selectable traction device. An on/off switch is mounted near the driver. When "off," the clutch pack (7), located behind the side gear (6), activates the limited-slip mode. As torque increases, the separating forces within the differential gears increase, causing the clutch pack to be compressed and, thereby, providing bias torque to the high traction wheel—your performance limited-slip differential action.

When selected "on," current is sent to the electromagnetic coil (8). The coil is retained by a clip that fits over one of the bearing cap bolts, making it non-rotational. The coil rides on a ball bearing (9). The ball bearings spin with the differential case

(10). The coil creates a magnetic flux so that the pilot cone (1) is pulled into engagement with the differential case (10). This frictional engagement causes the bearing balls (2) to ride up on a ramp machined into the side gear (3). This radial travel of the balls (2) also causes lateral movement of the side gear (3). The lateral movement of the side gear (3) applies a force onto the center block (4). The center block (4) has an elongated hole that the center pin (5) fits through, allowing it to float. The center block (4) applies force to the opposite side gear (6), compressing the clutch pack (7) giving the user a solid axle assembly and the locker performance desired at the strip or off-road.

EXAMPLE: Other Ected Max differentials will vary in design layout.

Ected Max™ Advantages

- Gearing is made from aircraft-quality 9310 heat-treated billet steel to make it as tough as nails!
- Can be switched on or off "on the fly," at any safe road speed.
- Does not have any shift forks or pins that must be lined up to obtain locker mode.
- Operates quietly — say good-bye to noisy lockers!
- Backed by a one-year warranty plus the industry's only D-REX Program (see page 28).
- Can be used in front-axle applications, with or without lockout hubs. (**Important Note:** The Ected Max is NOT recommended for use in front axles that feature an "inter-axle disconnect.")

	Open Diff	Limited-Slip Diff	Locker
Auburn Gear Ected Max		X	X
ARB Air Locker	X		X
Eaton Elocker	X		X

The Ected Max is the only selectable locker that offers both limited-slip and locker modes.

Service kits: See complete details for service kits on page 142.

IMPORTANT NOTE: Bearings not included unless specifically stated. Applications listed (make & year) are for reference only. Always verify axle/ring gear size, the ratio to be used and the number of axle splines prior to purchase and installation.

AMC 20, 12 Bolt

10 1/32" x 10 3/64" 12 Holes, Round

Make	Year
Ambassador	68-74
AMX	68-79
Concord	78-79
Gremlin	70-78
Hornet	72-78
Javelin	68-74

Best Warranty in the Industry—

D-REX stands for Differential-Replacement Exchange Program. Auburn Gear's limited-slip differentials are designed and manufactured with a robust and unique cone clutch mechanism. However, due to machining and assembly processes, the differential case and side gear/cone clutch mechanism are a matched set and therefore non-rebuildable. All other components within the Auburn Gear differential are replaceable and service kits are available. In order to address the non-rebuildable components within our limited-slip differentials we offer the D-REX unit.

Zephyr	79-83

542023, High Performance Series

542048, Pro Series

Model Years: 1978-Present

Applications: All Ford products with 7 1/2" ring gear. Accepts tone ring for ABS applications.

Ratios
All ratios

Side Gear Spline
28 Teeth

Bearing Cone
LM501349

Bearing Cup
LM501314

Special Note: Ford 7.5" applications require special "C" washers, which are supplied with the differential. Includes milled pinion shaft to accept 3.73-4.56 ratios.

Ford 8" 10 Bolt

11" 10 Holes, Oval

Make	Year
Falcon	62-70
Mustang	65-79
Comet	64-72
Cougar	67-72
Fairlane	60-72

Applications: All Ford products with 7 3/4" & 8" ring gear. Use Ford M-4216-B ring gear bolts for an open-type differential. Limited-slip type bolts are too long.

Housing modification for non-posi housings

Axle housings not originally equipped with a posi-traction will require modification to provide necessary clearance for the limited-slip differential.

No modifications are required if using an original posi housing.

Modify the non-posi housing by removing a portion of the rib as shown below.

Unmodified non-posi Housing

Modified non-posi Housing

remove material

Autocross Road Race Units

Auburn Gear, Inc. has developed a performance limited-slip differential specifically for road racing—a differential case designed to allow the center pin to float along with the axle shafts. This design feature aids the driver when cornering, so that when the driver is turning, the outside wheel axle shaft will apply a force to the center pin, hence, the pinion gears will firmly seat the inside cone/side gear assembly giving the racer an extremely "tight" rear axle. The greater the G-force the more bite you get! If you are an avid road racer you'll want this unit. It'll allow you to pass your competition. *Hook Up* with an Auburn Road Race Performance Differential—you won't be disappointed.

10 3/16" x 10 3/16" 10 Holes, Oval

542039, Autocross Road Race Series

Model Years: 1979-Present

Applications: All Ford products with 8.8" ring gear. Accepts tone ring for ABS applications.

Link and Pin Nomenclature

NOTE: A round pin chain can be rolled into a ball. A rocker pin chain cannot be. Each type requires certain sprockets and should not be interchanged. ET guide (elastically tuned) type guide links began in 1995 on certain applications. ET guide links more evenly distribute load for better wear characteristics.

Chain Components

- **Link Apertures:** Holes in Links either round or Rocker Joint shaped to match the connecting Pins. This is the area of articulation in the chain.
- **Guide Link:** Link plate positioned on the outside of the chain. This pilots the chain on the sprocket.
- **Link Flank:** Lower portion of link which engages the sprocket teeth.
- **Link Crotch:** Space between link flanks which clear the sprocket tooth tip.
- **Link Back:** The outside curvature of the Link design to provide strength and operating smoothness. Some are designed flat rather than curved.
- **Round Pin:** Singular round pin used to articulate the chain.
- **Rocker Joint Pin:** Two pins are utilized to articulate the chain.
- **Rocker Pin Styles:**
 - **Type 6900** two triangular pins that rock in the aperture
 - **Type 8600** two ovular-shaped pins that rock in the aperture (Some may be ET Guide.)
 - **Type 9600** two ovular-shaped pins that rock in the aperture. The guide link is an ET design riveted link.
 - **Type ZX** two ovular-shaped pins that rock in the aperture. The guide link is an ET design riveted link. Enhanced link closure design.

Chain Quality Parameters

- **Tensile Strength:** The ability of the chain to endure under the loads that are applied during sprocket engagement and operation. It is measured as the ultimate strength of the chain which is the load at which it would break or fail. There are centrifugal forces created during operation. The steel quality of the links and pins and the chain design are important in contributing to a high tensile strength.
- **Fatigue Strength:** The ability of the chain to endure the loads and operating conditions repeatedly over time.
- **Wear Rating:** The amount of wear that occurs during operation.

Chain Operating & Measurement Terms

- **Pitch:** Effective length between the centerpoints of the apertures, which are the points of joint articulation.
- **Width:** The approximate dimension between the inside and outside guide links.
- **Random Chain:** Certain patterns are interlaced in a random link pattern utilizing two different link styles in rows across the chain.
- **Chordal Action:** Radial or transverse motion of the chain strand resulting from sprocket engagement. Sound is created from this engagement.
- **Decibel Measurements:** The measurement of the total sound coming from the system in operation.
- **Chain Description:** Nominal measurements for a chain:
 - Example: 3/8P x 1-1/4 W x 72P
 - 3/8 pitch by 1-1/4 approximate width by 72 total pitches
 - 72 pitches would be 36 total guide plates per side

Why Morse® Hy-Vo® Chain?

Design Features and Benefits

Application Specific Design Styles: Morse offers a full line of applications which include round pin, three styles of rocker joint pin chain, ET guide links, and the new patented Morse Gemini® system. Each of these are specified by application based upon loads, operating conditions, and operating space. (Substituting design styles is not recommended since sprocket engagement would be affected.)

ET Guide Links: A patented guide link design which offers more even load distribution during operation. Chain designs will be upgraded based upon OE service conversions.

Chain Randomization: This is a patented design utilizing two different link styles to break up frequencies created from sprocket engagement. Patterns are selected at the time of OE design to minimize noise and vibration levels and to optimize operating strengths for each application.

Quality Features and Benefits

Quality and OEM Certification: In addition to having QS 9000 Certification, Morse Hy-Vo Products utilize only the finest grades of steel for the links and pins. This means no inclusions or dirt in the steel itself. This contributes to the highest Tensile, Fatigue, and Wear characteristics. Proprietary Design and Manufacturing Techniques also create the highest quality chain in the aftermarket.

Important Rebuilding Notes

Chain Elongation: Even though Morse Hy-Vo Products are built to last, when the rebuilder has the unit down, the sprockets and chain should be checked thoroughly.

Remember that it is very difficult for the aftermarket customer to measure chain elongation. One reason for this is shaft movement when the unit is apart. In certain cases, when the shafts are fixed with the cover off, an experienced field estimate may be acceptable.

Morse has special equipment to measure elongation parameters. In addition, each application could be different depending upon the application parameters.

The accuracy rate or error rate is 50% without using the right equipment to measure elongation of a chain. Every application has its own variations and the manufacturer's recommended specifications for chain tolerances should be referenced.

**If the chain has been in service for over 60,000 miles,
if the unit is torn down, or if the unit shows
signs of problems, neglect, or abuse – replace the chain.**

Morse Gemini® Chain System

*Use with new thrust washers from GM #24213762, Volvo #24213761 and reluctor wheel #24212217.

Morse Gemini® systems are a set of 2 chains which run on phased sprockets. This patented design significantly reduces the overall NVH (noise) in the system.

AX4N With 2.5, 3.0 Liter Vulcan and Duratec Engines	3/8 Pitch x 3/4 Wide x 86 Pitches, Rocker Joint 8600 Series (2 blue links side by side)	04-Up	HV-075
AX4N 4.6L 4V, 4.2L	3/8 Pitch x 7/8 Wide x 88 Pitches, Rocker Joint Type 9600 or 8600 Series (one blue guide link) 2004 change to 8600 Series from 9600 (Both will work)	95-Up	HV-042
AX4S (Windstar) (Freestar AX4N)	3/8 Pitch x 3/4 Wide x 88 Pitches, Round Pin Type (two copper guide links)	96-11/04	HV-041
4F50N With 3.9 Liter Engine	3/8 Pitch x 3/4 Wide x 88 Pitches, Rocker Joint 8600 Series (two copper guide links)	05-Up	HV-092
CD4E (Contour/Mondeo 2.0L)	.4346 Pitch x 3/4 Wide x 90 Pitches, Rocker Joint Type, ET Guide (one copper guide link)	94-02	HV-043
CD4E (Mystique/Cougar 2.0L)	.4346 Pitch x 3/4 Wide x 90 Pitches, Rocker Joint Type, ET Guide (one copper guide link)	98-02	HV-043
CD4E (2.5L/3.0L V6)	.4346 Pitch x 1 Wide x 92 Pitches, Rocker Joint Type 8600, ET Guide (two copper guides separated by two silver guide links)	94-Up	HV-044
CD4E (1.8L/2.0L I4) Mazda	.4346 Pitch x 3/4 Wide x 92 Pitches, Rocker Joint Type, ET Guide (two copper guide links next to each other)	94-04 (2.5L 2000-04)	HV-045

AXOD

Note: CD4E ET Guide Upgrade:

HV043 Used with the 2.0 Liter Engine, F3RZ7G249A, F6RZ7G249AA

HV044 Used with the 2.5 and 3.0 Liter Engines through 99, F5RZ7G249C, F6RZ7G249CA

HV045 Used with 2.0 Liter Probe, the later 2000 Model Yr 2.5L are 3/4 Wide, F5RZ7G249B, F6RZ7G249BA

The latest CD4E chains use the ET Guide Technology for better wear characteristics and load distribution. The earlier non ET Guide chains should be replaced with the newer chains when the unit is down.

GM L Van All Wheel Drive Astro, Safari, and Cargo Applications with BW 1372/4472 Transfer Case - HV032 (Straight Pitch)

The HV032 and the HV033 applications should not be consolidated or substituted for each other. The HV032 is a straight pitch design, and the HV033 is a random pitch design. If the rebuilder uses the HV033 Random Patterned Chain in the L Van application, the vehicle operator may hear an unsatisfactory "moan" or "boom" noise from the vehicle's driveline during operation.

Conversely, if the HV032 straight pitch chain (all rounded back links) is used in the GM S Blazer truck, the Bravada, Cyclone, and Typhoon applications that use the BW 1372/4472 with a random chain design, the vehicle owner will hear a whistle or whining noise.

Morse TEC
Limited Edition
BorgWarner, Torque-On-Demand®
Transfer Case
Part Number 5005831
Watch for promotions during the year!

*HV025 is a round pin design which is the latest for the NVG 208 Dodge and NVG 241 GM & Dodge applications. The HV025 can replace the HV014 without sprocket problems in these applications.

Troubleshooting Guide for Transmission and Transfer Case Hy-Vo Chain and Sprockets

SYMPTOM	CAUSE(S)	CURE(S)
Excessive Chain Wear on the guide link inside flank area	Sprockets misaligned or out of parallel.	Realign sprockets.
Chain wear on Outside/Back of chain	Interference with case and/or excessive elongation.	Replace chain and sprockets.
Burnt Chain	Overheating, lack of lubrication.	Replace chain and inspect the lubrication situation.
Rusty Chain	There may be corrosion in the system or inadequate lubrication.	Avoid abuse, replace sprockets, check for water in oil, replace any faulty seals or breather elements, and correct lubrication situation.
Broken Links, Turned Pins	Drive system may be overloaded or there may be excessive slack in the chain causing it to "jump teeth." Or, there may be a foreign object in the system.	Replace the chain, remove and repair the damage. Avoid overloading the drive system.
Extreme flank wear	Worn sprockets, lack of proper lubrication.	Replace sprockets and chain and correct the lubrication problem.
Excessive premature Sprocket Wear	Mismatched new and old sprocket.	Always replace both sprockets.
Sprocket wear — Light Wear — Heavy Wear - Pitting	A certain amount is normal.	For heavy wear: Replace both the sprocket and chain.
Lubrication smells bad and is dark in color.	Overheating.	Drain and flush the case, check for cause of overheating and damaged components, replace the chain, refill lubricant to manufacturer specifications. In automatic transmissions, check for slipping clutches or a failed torque converter.
Excessive noise or vibration	Broken links, inadequate lubrication, misalignment, or eccentricity/face runout in sprocket.	Replace with properly machined sprockets, replace chain, check shafts of sprockets and realign, check bearings, correct any lubrication situation to manufacturer specifications.
Milky or muddy Lubrication	Probable water contamination.	Drain and flush case several times (at least three), check seals and breather components, check for other damaged components, replace chain and refill lubrication to manufacturer specs.

Porque la Cadena Morse® Hy-VO®?

Características y Beneficios de Diseño:

Estilos de Diseño específicos de Aplicaciones: Morse ofrece una completa línea de aplicaciones que incluye perno redondo, tres estilos de cadena con unión de perno oscilante, eslabones guía ET, y el nuevo sistema patentado Morse Gemini® system. Cada uno de estos estilos son específicos por aplicación dependiendo de las cargas, las condiciones operativas, y el espacio de operación. (No se recomienda substituir estilos de diseño, puesto que el acoplamiento con los engranes se vería afectado.)

Eslabones Guía ET: El nuevo diseño patentado de eslabones guía ofrece una mejor distribución de la carga durante la operación. El diseño de cadenas será perfeccionado basados en las conversiones de servicio en Equipo Original.

Aleatorización de la Cadena: Este es un diseño patentado que utiliza dos diferentes estilos de eslabones para eliminar las frecuencias creadas en el acoplamiento con el engrane. Los patrones son seleccionados cuando se realiza el diseño de Equipo Original para minimizar el ruido y los niveles de vibración, así como para optimizar las fuerzas operativas de cada aplicación.

Características y Beneficios de Calidad:

Calidad y Certificación de Equipo Original: Además de tener la certificación QS 9000, los productos Morse HyVo, utilizan sólo aceros de la más alta calidad para los eslabones y los pernos. Esto significa que la lámina no tiene en sí inclusiones ni impurezas, contribuyendo a mejores características de tensión, fatiga y desgaste. Así mismo, el diseño y las tecnologías de manufactura especiales crean la cadena de mejor calidad en el mercado de refacciones.

Notas Importantes para los Reconstructores:

Elongación de Cadena: A pesar de los productos Morse HyVo, son fabricados para tener una máxima duración, cuando el reconstructor tiene la unidad desmontada, los engranes y las cadenas deben ser verificados.

Recuerde que es muy difícil para el cliente de refacciones medir la elongación de la cadena. Una razón para esto es el movimiento del árbol de levas cuando la unidad se encuentra separada. En algunos casos, cuando el árbol de levas está fijo y sin cubierta, la estimación de una persona experimentada en el campo puede ser aceptable.

Morse cuenta con equipo especial para medir los parámetros de elongación. Además cada aplicación puede ser diferente dependiendo de los parámetros de la aplicación.

Si no se utiliza el equipo adecuado para medir la elongación de la cadena, el rango de precisión o de error es de 50%. Cada aplicación tiene sus propias variaciones y las especificaciones recomendadas por el fabricante para las tolerancias de la cadena deben ser referenciadas.

**Si la cadena ha estado en servicio por más de 60,000 millas (95,000 kms),
si la unidad está rasgada, si muestra
signos de problemas, descuido o desgaste – reemplace la cadena.**

Rebuild Kits and Components Interchanges

While this catalog is as current as possible at the time it was printed, it is quickly outdated due to our continued efforts of adding rebuild kits and related products for additional models and newer vehicles.

The following pages only contain interchanges for the most common OEM part numbers for heavy duty applications. The DT components E-Catalog, contains interchanges for over 330,000 automotive, heavy duty and agricultural part numbers.

Please access our E-catalog via www.dtcomponents.com for complete interchange information along with additional products, images and product specifications that are not included in this catalog.

DT Components Web Site

The redesigned and more informative DT Components web site contains product information, literature, customer login, and a link to our web catalog.

Center Support Bearings

DT Components center support bearings are available for a broad range of domestic and foreign passenger cars, SUV's, pickup trucks as well as medium and heavy duty truck applications. Each center support bearing is engineered and constructed for the specific vehicle application ensuring precise driveshaft alignment and support. All center support bearing components are manufactured at ISO9001 certified or higher factories and go through rigorous testing throughout the manufacturing process to ensure the highest possible quality is built into every unit.

The bearings contained within the center supports are designed to provide smooth and quiet operation under the harshest conditions. Every bearing is pre-lubricated for life and sealed with metal reinforced seals preventing moisture and contaminants from entering the bearing. The center support rubber cushions are manufactured using a special formula that blends the highest quality materials into a rubber compound that provides support while absorbing and isolating vibrations that could damage the driveline.

Center support frames are constructed from cold rolled steel for additional strength and feature a protective corrosion resistant coating to protect it from the elements and road salt. DT Components center support bearings are available with and without flingers where applicable.

This DT Components catalog is organized by U-Joint series and vehicle specific applications. Photos of each center support bearing are arranged in numeric order so customers can visually confirm the correct part identification before ordering. Complete interchange and vehicle application information is located in our electronic catalog that is accessible through the DT Components website.

FOR WORN YOKES & SHAFTS RESLEEVEING

E-Z SLEEVE restores your worn yokes and shafts to give them new life. E-Z SLEEVE is so hard, wear resistant and friction free, it will set new standards for trouble free sleeving.

The concept of a thin wall flanged sleeve is very popular for fast sleeving of shafts and yokes. However the results often fall short of expectations. The soft sleeves lack durability and operate with too much resistance (resulting in excessive heat and failures).

E-Z SLEEVE eliminates these problems and provides a long life sleeve at an affordable price.

E-Z SLEEVE's innovative technology will set the new standard in the industry.

What sets E-Z SLEEVE apart from other sleeves?

- **HARD CHROME COATING**

E-Z SLEEVE stainless steel sleeves are hard chromed to a hardness of 68RC.

- **LOWER COEFFICIENT OF FRICTION**

Hard chrome provides a smoother surface and has a lower coefficient of friction that reduces heat and seal wear.

- **BETTER SEAL FIT**

E-Z SLEEVE minimize the change to the original shaft diameter. This provides a better fit between the repaired shaft and the seal.

E-Z Sleeve Repair Sleeves

MileMate®

ONE SIMPLE GOAL:

Keep Your Trucks Up and Moving

Timken® MileMate® sets – the original matched wheel bearing sets – are designed to keep your trucks up and moving. Our 44 matched cup and cone sets are built for superior results and less downtime. When you use the original MileMate sets from Timken, you know you're getting bearing sets specifically designed for your application that meet or exceed the original equipment manufacturer's specifications. This includes the ConMet® PreSet® and Spicer® LMS™, as well as the new wide single tire applications.

Features

- Made from quality Timken certified steel
- Perfectly matched sets for correct installation every time
- Original equipment technology

Benefits

- Matched sets mean less inventory and the bearing parts in one box to perform the job
- Lengthens maintenance intervals
- Optimizes bearing performance
- Allows bearings to carry evenly distributed loads
- Original equipment on ConMet PreSet and Spicer LMS enhances performance

Timken Proprietary “NP” Part Numbers

Meeting the growing original and aftermarket performance demands.

Features

- Enhanced surfaces
- Proprietary Timken design
- More precise internal bearing geometry
- Exceed industry standards

Benefits

- Designed to provide longer life and reliability
- Many heavy-duty, pre-adjusted hubs are serviceable such as ConMet PreSet and Spicer LMS
- Rebuilding with Timken proprietary parts ensures you get all the advantages that were originally engineered into the heavy-duty, pre-adjusted hub systems
- Specifically designed to handle the 2" outset loads found in wide single tire configurations

TIMKEN® 454-SERIES™ WHEEL BEARINGS FOR COMMERCIAL VEHICLES

Bearings for dual tires and wide single tires

- Specially designed to handle the 2-inch outset loads
- Allows consistency within fleets
- Provides flexibility of wheel arrangements

Compatible with industry-standard components

- Use with popular axle and hub designs
- Can retrofit into existing equipment

Designed to improve bearing life

- Highly-engineered internal raceway profiles for optimal stress distribution
- Proprietary enhanced surface finishes

At Timken, we recognize the need of commercial vehicle customers to conserve fuel, carry greater loads, standardize components and maximize uptime. These are the driving factors behind Timken® 454-Series™ wheel bearings. These bearings are geared toward helping your fleet operate more efficiently and cost effectively.

Our 454-Series wheel bearings deliver tomorrow's high-performance wheel-end technology today.

For additional information, contact your Timken sales representative or our dedicated team of automotive and heavy-duty customer service representatives at: phone (866) 9-TIMKEN (984-6536), or fax (877) TIMKEN-9 (846-5369).

Effect of Wheel Outset

These wheel images represent the shift in load line location from a standard dual tire to a 2-inch outset wide single tire.

This wheel-end cross section represents the increased loading present on the outer bearing, when using a wide single tire.

Application	Manual Adjusted			Pre-Adjusted

N Trailer Outer	NP454049	NP454011	SET440*	NP454357	NP454773	SET603*	
P Trailer Inner & Outer	NP454445	NP454410	SET444*	NP454964	NP454561	SET604*	TPTC2

* Includes proprietary Timken part numbers

** Each kit includes two MileMate® Sets and a spacer.

Note: A wheel bearing is one component of a wheel-end system. Consult your other wheel-end suppliers (i.e., axle, hub and wheel) for the ratings of their products.

Factors that can affect tapered roller bearing life

Uniform Internal Geometry

Industry bearing standards set only I.D., O.D., overall bearing width and cup angle of a tapered roller bearing. The angle of contact for cones and rollers varies by brand. Timken internal geometry is uniform and consistent, helping to ensure a perfect match every time. Tight manufacturing tolerances on the cup, cone and rollers help to optimize bearing life.

Enhanced Surface Finishes

We employ advanced finishing processes, which result in more consistent, smoother surface finishes on our bearing races and rollers. Smoother surface finishes mean less friction and greater efficiency.

Timken – The Right Choice

Timken technology offers uniform internal geometry, enhanced surface finishes, special profiles and quality steel to help fleets maximize bearing life.

Special Profiles

Special profiles reduce stress on Timken bearing races and rollers by providing even distribution of loads across contact surfaces, increasing load-carrying capacity.

If your fleet can't afford downtime associated with lower bearing life, then you need Timken.

Steel Quality

Timken provides customers around the world with high-quality steel. Capitalizing on the synergy between our bearing and steel businesses, we use our expertise to select bearing materials that meet the most demanding application requirements and help extend bearing life.

Manual Wheel Bearing Adjustment Procedures

The goal of this recommended procedure is to achieve a verifiable wheel bearing end play of 0.001" to 0.005" (.025 mm to .127 mm). This procedure applies to steer, drive and trailer axle assemblies using conventional double nut or single nut systems on Class 6, 7 and 8 trucks. This refers only to torque specifications and bearing adjustment. Please refer to the original equipment manufacturer's recommended procedures for complete installation details.

NOTE: For single nut self-locking systems, consult manufacturers' instructions. If you have a system that differs from what is indicated in this procedure, consult the vehicle manufacturer's recommended procedure.

Tapered Roller Bearing Adjustment Procedure RP618A

Step 1: Lubricate the tapered roller bearing with clean axle lubricant of the same type used in the axle sump or hub assembly. NOTE: Never use an impact wrench when tightening or loosening lug nuts or bolts during the procedure.									
Initial Adjusting Nut Torque	Initial Back Off	Final Adjusting Nut Torque	Axle Type	Threads Per Inch	Final Back Off	Nut Size	Torque Specifications	Acceptable End Play	
Step 2	Step 3	Step 4	Step 5		Step 6	Step 7		Step 8	
200 lbf•ft (271N•m) While Rotating Wheel	One Full Turn	50 lbf•ft (68 N•m) While Rotating Wheels	Steer (Front) Non-Drive	12	1/6 Turn*	Install Cotter Pin to Lock Axle Nut in Position		0.001" - 0.005" (.025 - .127 mm)	
				18	1/4 Turn*				
				12	1/3 Turn*	Less Than 2 5/8" (66.7 mm)	200-300 lbf•ft (271-407 N•m)		
				14	1/2 Turn*				
				18					
			Drive	12	1/4 Turn*	Dowel Type Washer	300-400 lbf•ft (407-542 N•m)		As Measured Per Procedure With Dial Indicator
				16		Tang Type Washer**	200-275 lbf•ft (271-373 N•m)		
			Trailer	12	1/4 Turn*	Less Than 2 5/8" (66.7 mm)	300-400 lbf•ft (407-542 N•m)		
				16					

* If dowel pin and washer (or washer tang and nut flat) are not aligned, remove the washer, turn it over and reinstall. If required, loosen the inner (adjusting) nut just enough for alignment.

** Bendable type washer lock only: Secure nuts by bending one wheel nut washer tang over the inner and outer nut. Bend the tangs over the closest flat perpendicular to the tang.

Verify end play with a dial indicator. Wheel end play is the free movement of the tire and wheel assembly along the spindle axis.

- Make sure the brake drum-to-hub fasteners are tightened to the manufacturers' specifications.
- Attach the dial indicator with its magnetic base to the hub or brake drum.
- Adjust the dial indicator so that its plunger or pointer is against the end of the spindle with its line of action approximately parallel to the axis of the spindle.
- Grasp the wheel assembly at the 3 o'clock and 9 o'clock positions. Push the wheel assembly in and out while oscillating it to seat the bearings. Read the bearing end play as the total indicator movement.

NOTE: If end play is not within specification, readjustment is required.

TMC RP 618A, Wheel Bearing Adjustment Procedure, appears in TMC's 2010-2011 Recommended Practices Manual, and is published by the Technology & Maintenance Council (TMC) of American Trucking Associations; 950 N. Glebe Road, Arlington, VA 22203; (703) 838-1763; <http://tmc.truckline.com>. Reprinted with permission.

Pre-Adjusted Wheel Bearing Adjustment Procedures

NOTE: This refers only to torque specifications and bearing adjustment. Please refer to the original equipment manufacturer's recommended procedures for complete installation details.

- Mount the hub assembly onto the axle spindle, while holding the outer cone in place. Make sure the bearing cones, spacer and spindle are aligned to avoid seal damage.

⚠ WARNING Do not remove the outer bearing once it has been installed on the spindle. Removing it could cause the seal to become misaligned and lead to a seal failure or loss of a wheel, creating a risk of death or serious bodily injury.

- Install the inner spindle nut and torque to 300 ft-lbs.

NOTE: Do not back off the spindle nut.

- Engage the locking device that is part of the spindle nut system.

If the locking system cannot be engaged when the nut is at 300 ft-lbs, advance the nut until the locking system can be engaged (reference note above). If a double nut or jam nut system is being used, bend the lock tab or install the set screw after the outer nut is torqued to 200 ft-lbs.

For one-piece spindle nut systems, torque the nut to a minimum of 250 ft-lbs. Do not back off the spindle nut. Engage any locking device that is part of the spindle nut system. If the locking device cannot be engaged when the nut is at 250 ft-lbs, advance the nut until engagement takes place and the nut is locked.

⚠ WARNING Always follow wheel torque recommendations. Excessive or inadequate wheel torque can lead to failure of the wheel mounting system and loss of a wheel, creating a risk of death or serious bodily injury.

Timken Set-Right® Heavy-Duty Hub Rebuild Kits and Components

⚠ WARNING Failure to observe the following warnings could create a risk of serious injury.

Proper maintenance and handling procedures are critical. Always follow installation instructions and maintain proper lubrication.

Never spin a bearing with compressed air. The rollers may be forcefully expelled.

This information is not intended to substitute for the specific recommendations of your equipment suppliers. Every reasonable effort has been made to ensure the accuracy of the information contained in this writing, but no liability is accepted for errors, omissions or for any other reason.

Timken #1 in Comparison Test:

**Tapered Roller Bearings
Commonly used in Heavy-Truck
Axles and Wheel-Ends**

Setting new standards in bearing life

Since its beginning, Timken has led the industry with significant breakthroughs in bearing technology designed to enhance bearing life. Every Timken® bearing is the result of more than 100 years of experience, knowledge and analysis. This gives us the expertise to explain and, most critically, to analyze and predict bearing life.

While determining bearing life sounds simple enough, it is actually a complex problem that demands a range of technological solutions. At Timken, we have developed highly sensitive tests that help us analyze and validate bearing life.

Timken case-carburized tapered roller bearings: #1 in comparison test

We originally formulated the case-carburizing process for our alloy steel in 1924 to produce a hard, fatigue-resistant surface and a tough, crack-resistant core. Material composition and microstructure play a significant role in enhancing bearing life. Controlled retained austenite optimizes surface hardness of high-carbon steels and improves surface ductility, resulting in better rolling-contact fatigue life.

We recently tested case-carburized tapered roller bearings commonly used in heavy-truck axles and wheel-ends. All the bearings tested were case-carburized and all are commercially available and produced in North America.

The result: Timken bearings out-performed all others. The bearing life of the closest competitor was 13% of that of Timken product. In other words, the life of Timken product was more than 7 times longer than that of the closest competitor.

Are we proud? Absolutely. Surprised? Not a bit. Timken engineers and scientists work around the world continuing the push toward new levels of bearing life.

Comparison of Bearing Life: Case-carburized tapered roller bearings commonly used in heavy-truck axles and wheel-ends

**BEARING LIFE TEST RESULTS:
MEDIAN LIFE RELATIVE TO TIMKEN**

All the bearings tested were case-carburized and all are commercially available and produced in North America. Bearings A, B, C and D are manufactured by top competitors. Information derived from Timken Standard Life Testing, using significant statistical samplings of bearings in a controlled test environment.*

Factors that can affect tapered roller bearing life

Uniform Internal Geometry

Industry bearing standards set only I.D., O.D., overall bearing width and cup angle of a tapered roller bearing. The angle of contact for cones and rollers varies by brand. Timken internal geometry is uniform and consistent, helping to ensure a perfect match every time. Tight manufacturing tolerances on the cup, cone and rollers help to optimize bearing life.

Enhanced Surface Finishes

We employ advanced finishing processes, which result in more consistent, smoother surface finishes on our bearing races and rollers. Smoother surface finishes mean less friction and greater efficiency.

Timken – The Right Choice

Timken technology offers uniform internal geometry, enhanced surface finishes, special profiles and quality steel to help fleets maximize bearing life.

Special Profiles

Special profiles reduce stress on Timken bearing races and rollers by providing even distribution of loads across contact surfaces, increasing load-carrying capacity.

If your fleet can't afford downtime associated with lower bearing life, then you need Timken.

Steel Quality

Timken provides customers around the world with high-quality steel. Capitalizing on the synergy between our bearing and steel businesses, we use our expertise to select bearing materials that meet the most demanding application requirements and help extend bearing life.

Set-Right™ Heavy-Duty Hub Rebuild Kits

Rebuild Your Hubs & Get the Timken Advantage

Go With the Proven Leader

To make it easier and more convenient for you to rebuild hubs, Timken now offers Set-Right™ Heavy-Duty Hub Rebuild Kits incorporating two Timken® MileMate® sets – the original matched wheel bearing sets produced in North America – and a precision OE spacer.

Using our specially toleranced bearings in conjunction with a precision OE-machined spacer allows you to achieve the proper wheel bearing end-play, eliminating the need for manual bearing adjustment. The repeatability of the bearing setting range provides for optimum seal and bearing life. This consistency could help reduce fleet fuel costs.

We understand what the heavy-duty industry demands from their bearings and provide quality products that help keep fleets operating more efficiently and cost effectively. In fact, if you look inside your wheel-ends, the odds are in your favor that you'll find Timken bearings. Why not replace them with the original? Go with the proven leader.

Timken is where you turn for original matched wheel bearing sets and the assurance that your bearings are Set-Right.

Set-Right Kits – The Right Choice for You

- *Enable faster and more reliable wheel-end builds; help improve up-time*
- *Reduce inventory with lower component counts*
- *Help optimize seal performance and life*
- *Eliminate manual adjustment, one of the leading causes of wheel end issues*

Timken Technology

In the mid-1970s, Timken engineers developed the Set-Right setting method to help optimize bearing

performance. Then, in the mid-1990s, working with the leader in heavy-duty hub innovation, this pre-adjusted bearing technology was launched into the North American marketplace. The bearings used in these applications are known as half-stand bearings; they have half the stand tolerance (measurement tolerance) of that used in standard bearings. This means that the stand tolerance is twice as stringent (see diagram on backside). Timken has been supplying these bearings for the North American heavy-duty industry's most popular pre-adjusted wheel ends since 1995.

Kit Components

Quality Timken® MileMate® Bearings

- *Original equipment used in heavy-duty, pre-adjusted wheel hub assemblies since 1995*
- *Engineered exclusively for pre-adjusted wheel hubs*
- *Precise half-stand tolerancing provides accurate setting every time*
- *Consistent and reliable internal geometry equals known performance*
- *Helps lengthen maintenance intervals*
- *Helps optimize bearing performance*
- *Timken "NP" part numbers*
 - Proprietary design
 - Enhanced surfaces
 - More precise internal bearing geometry
 - Exceed industry standards
 - Rebuilding with NP parts helps ensure you get all the advantages that were originally engineered into the heavy-duty, pre-adjusted hub systems

Precision Machined Cone Spacer

- *Designed for the rigorous demands of the heavy-duty wheel market*
- *Made from high-strength alloy*
- *Manufactured to precise tolerances*
- *Combined with Timken half-stand bearings and a special toleranced hub, the need for manual adjustment is eliminated*

 ** Spacer not sold separately

CAUTION

Prior to retrofitting or rebuilding your existing pre-adjusted wheel-end, you must start with the proper hub. Hubs designed for use with the Set-Right kits have special internal tolerancing that helps achieve maximum performance. Contact your hub supplier if you are unsure. The use of a standard hub will create an undesirable setting range, which may result in component damage.

Controlled Width Bearing Description

Assembled Stand Tolerance =
 Measurement between the cone front face
 and cup back face
 Standard bearing tolerance = A
 Half-stand bearing tolerance = 1/5 of A

Heavy Duty Clutch Pilot Bearings

DT Components heavy duty clutch pilot bearings are specifically designed to withstand the higher temperatures encountered in today’s demanding applications and meet or exceed the OEM’s recommended ratings.

Due to the increasing demands of newer engines and transmissions, clutch pilot bearings operate at higher temperatures than previously encountered. OEM’s have been specifying clutch pilot bearings with higher temperature rated seals and grease for nearly 20 years in order to prevent premature bearing failure.

When standard clutch pilot bearings are operated in these higher temperature environments, the seals start to breakdown and the grease liquefies. This allows the grease to be purged past the bearing’s seals and a loss of lubricant inside of the bearing. Bearings operating without any lubricant quickly become noisy and ultimately fail.

We recommend that DT Components heavy duty clutch pilot bearings be used in all applications to reduce the risk of premature bearing failure.

	Part Numbers	Seal Temperature Rating	Grease Temperature Rating
Standard Bearings	205FF, 306DD & 306DDL	+248° F / +120° C	+347° F / +177° C
Heavy Duty Bearings	205VV, 306VV & 306VVL	+419° F / +215° C	+400° F / +204° C

Heavy Duty Clutch Pilot Bearings

DT[®]
Components
Drivetrain Products

North Coast Bearings markets and distributes differential rebuild kits, transmission rebuild kits and related products to the heavy, medium and light duty aftermarkets under the DT Components[®] product line. The brand was created through a strategic alliance with The Timken Company.

Our continually growing product line includes rebuild kits for the broadest range of on highway vehicles along with complementing gearing, axle shafts, u-joints and related products. Please visit our website for the latest news, information and literature on all of the North Coast Bearings products.

DT Components is the most recognized and respected brand of differential and transmission rebuild kits in North America. Our mission is to provide the best value in differential and transmission kits and components. Best value means Timken[®] tapered roller bearings, the best order fill, the fastest in-house turn-around time, US manufacturers' product where available, superior quality and personalized service.

Over 2,500 Different Rebuild Kits

Hand Installed Wheel Seals

DT Components[®] wheel seals are designed to be the easiest seal you will ever install. No tools are necessary. You simply lubricate the rubber outside diameter; align the seal with the hub, and hand press the seal into hub.

The ribbed design allows the seal to be easily installed without tools, but grips the hub bore so the seal cannot back out once the seal is seated. The wide rubber outside diameter completely seals inside the wheel hub and helps seal hub bore imperfections.

While being designed to be easily hand installed, the three piece cartridge outer wall provides maximum strength to support installation with any wheel seal manufacturer's installation tool. This enables the installer to choose the installation method and tool that he prefers.

DT Components wheel seals were designed in England by a billion dollar global company that supplies products to OEM's and aftermarket customers worldwide. Manufactured in a state of the art ISO/TS 16949 certified facility, DT Components wheel seals are subjected to strict quality control procedures during every step of the manufacturing process to ensure OEM's and aftermarket customers alike will receive the highest quality product.

DT Components is the most recognized and respected brand of differential and transmission rebuild kits in North America. The brand was created through a strategic alliance formed in 1997 by North Coast Bearings and The Timken Company to sell and market rebuild kits and drivetrain products to the heavy, medium and light duty aftermarkets.

Our mission is to provide the best value in differential and transmission kits and related components. Best value means Timken[®] tapered roller bearings, the best order fill, the fastest in-house turn-around time, US manufacturers' product where available, superior quality and personalized service.

Wheel Seal Key Features

1. The wheel seals are designed to be easily hand installed or installed using any brand of wheel seal installation tools which reduces installation time and costs.
2. The seals outer wall is constructed with a robust 3 piece cartridge design to provide maximum strength.
3. The primary sealing lip is a hydrodynamic lip that pumps the oil back to the bearings helping with the bearing lubrication and has a centrifugal lip configuration that provides constant lip load at varying wheel speeds.
4. The primary sealing lip makes contact with a polished running surface which insures consistent seal contact and reduces friction and heat and extends the seals life.
5. The wheel seal has a wide sealing surface contact in the wheel hub providing maximum sealing and helps seal imperfections in the wheel hub.
6. The wheel seal also has a wide sealing surface on the spindle shoulder which helps seal spindle imperfections and provides maximum sealing.
7. The primary sealing lip is completely enclosed to prevent contamination and installation damage.
8. The axial dirt lip has a fixed wiper lip interference that excludes dirt and prevents pre-installation contamination.
9. The steel outer wall makes a metal to metal contact in the bottom of the wheel hub to insure proper seating and helps dissipate heat through the wheel hub.
10. Controlled lubrication holes maintains proper lubrication to the sealings lips and directs the oil back to the bearings.
11. All exposed metal surfaces are zinc plated to prevent corrosion.

Slurry Test

Extensive testing has been performed on the DT Components wheel seals to guarantee that our seals will out perform other brands of seals no matter how harsh the environment.

We installed the DT Components wheel seals and the competitor's wheel seals in an environmental testing rig and ran them head to head to see which seal would fail first. The seals were tested running half buried in sand as well as being submerged in a slurry consisting of a mixture of salt, sand, aggressive dust and seawater to simulate the worst possible conditions for a wheel seal.

The DT Components wheel seal's hydrodynamic pumping lip and polished running surface kept contaminants from penetrating the seal and lasted up to three times longer than the competitor's wheel seals.

DT Components wheel seals superior design and simple installation provides customers a trouble free and better performing life than other brands of wheel seals.

Quality

Manufactured in a state of the art ISO/TS 16949 certified facility, DT Components wheel seals are subjected to strict quality control procedures during every step of the manufacturing process to ensure OEM's and aftermarket customers alike will receive the highest quality product.

REAR WHEEL REPAIR PACKAGE BEARINGS

SIX PART NUMBERS NOW AVAILABLE

RP1561FO	Cylindrical roller bearing – replaces R 1561 TV bearing and seal used on Ford and Dodge 1.700" axles.
RP1561G	Cylindrical roller bearing – replaces R 1561 TV bearing and seal used on Chevrolet and GMC 1.700" axles.
RP513023	Cylindrical roller bearing – replaces 513023 TV bearing and seal used on Chevrolet and GMC van axles.
RP1559	Cylindrical roller bearing – replaces R 1559 TV bearing and seal used on a variety of GM , Ford and Chrysler cars and pickup trucks with 1.399" axles. 10 bolts.
RP5707	Cylindrical roller bearing – replaces R 1563 TAV bearing and seal used on a variety of GM , Ford and Chrysler cars and pickup trucks with 1.399" axles. 10 bolts.
RP513067	Cylindrical roller bearing – replaces 513067 bearing and seal used on a variety of Chevrolet and GM trucks axles with 8.5" ring gear. Available only as a repair package bearing.

REAR WHEEL REPAIR PACKAGE BEARING

Repair package bearings replace the original bearing and seal on axles which are still in good condition whose original bearing and/or seal contact paths are not suitable for continued use. The extra-wide Repair Package Bearing repositions the rollers and seal to ride on unworn portions of the axle closer to the flange. The Repair Package Bearing is lubricated through the axle tube by differential fluid, just like the original equipment design.

BEFORE INSTALLATION

Asses the shaft's general condition as not all axles are fit for reuse. Look for any signs of damage or wear. DO NOT REUSE axles that exhibit the following conditions:

- **BENT OR DISTORTED AXLES**, even if they could be straightened.
- **AXLES WITH SURFACE CRACKS**. Surface cracks may indicate impending failure, as cracks may grow and cause weakening of the axle or complete breakage.
- **DISCOLORED AXLES**. Discoloration (usually blue or black) may result from overheating while in operation.
- **NOTICEABLE WEAR ON AXLES** at the original bearing path. Wear may be indicated by a worn groove, heavy corrosion or surface spalling.

NOTE: Axles unfit for reuse are not limited to those exhibiting these conditions. Other conditions may also render an axle unfit for reuse.

INSTALLATION PROCEDURE

1. Follow the manufacturer's procedures for disassembling the axle, seal and bearing.
2. Clean and polish the axle between the flange and the original roller path using a fine grade emery paper. Smooth any nicks or burrs. The repair bearing and seal will ride on this area. Check the axle housing and clean it as necessary. **WARNING: DO NOT** reuse any axles that are distorted or bent, discolored, have surface cracks or have noticeable wear at the original bearing path.
3. Remove the replacement bearing from its box and remove its protective wrapping. Dip the bearing in clean differential oil and allow to drain.
4. Install the bearing in the axle housing with the seal facing out. Use an installation tool that rides on the face of the bearing. If you use the wrong installation tool, you will damage the seal which may cause a failure. No force should be applied to the seal. Once an axle shaft seal has been removed, never reuse it.
5. Reinstall the axle following the vehicle manufacturer's assembly procedures.
6. Finally, fill the differential with fluid to the level recommended by the vehicle manufacturer.

THE TIMKEN COMPANY

P900™ Bearings

Reduce size, weight and cost ... or increase power for your application

The world's most demanding applications require the world's best-performing bearings. Timken® P900™ bearings handle greater loads than traditional bearings, cost-effectively improving your product's performance and efficiency.

The technology behind P900 offers you the advantage of a benefit we call "power density." Simply put, power density allows you to use smaller bearings that can handle the same load as the original or pack more fatigue endurance into an existing envelope. You can now specify bearings without compromise.

Think of the cost-saving advantages of power density. You can downsize the bearings and related components, reaping the benefits of a lower system cost while handling the same loads. Or, you can increase power for your application without the costly process of retooling the system.

Do more with less

P900 bearings are designed to help manufacturers do more with less. For manufacturers of automobiles, P900 bearings offer the advantages of reduced weight in transmissions, transaxles, drive axles and other components. These advanced bearings meet industry demands for greater reliability, improved performance and extended life in power transmission designs that are smaller and operate at higher temperatures and with greater deflection than ever before.

Gear drive manufacturers downsize with P900 bearings for substantial savings in total system cost.

For heavy-duty trucks, P900 bearings allow more payload per vehicle and the potential for generating more revenue.

P900 bearings benefit manufacturers of heavy-duty trucks by allowing for reduced weight in transmissions and drive axles. They also allow more payload per vehicle and offer the potential for generating more revenue.

The same benefits apply to off-highway equipment, where P900 bearings help manufacturers design equipment that consumes less energy while performing more efficiently and reliably.

P900 bearings are now being used by gear drive manufacturers and in other industrial applications, where they facilitate increased power throughput. In applications where diminished size is an advantage, downsized P900 bearings allow manufacturers to replace critical-application bearings with smaller bearings that handle the same loads as the originals. This allows for reduced dimensions of related components and can mean substantial savings in total system cost.

Timken innovations have made these cost and performance advantages a reality as P900 advances set industry standards for increased power throughput, efficiency and durability.

TM — A trademark of The Timken Company.

P900 bearings boost the efficiency and reliability of off-highway equipment.

Super-clean steel

Every P900 bearing begins with an important advantage — Timken's super-clean air-melt steel. This benefit is a Timken original: The Timken Company is the only American bearing manufacturer that makes its own steel. Our state-of-the-art facilities and the knowledge gained from more than 80 years of steel-making experience have allowed us to dramatically raise the level of bearing performance worldwide by offering decreased inclusion content, prolonged bearing life, increased reliability and improved resistance to hostile environments.

Advanced bearing geometry

The advanced geometry of Timken P900 bearings virtually eliminates edge stress concentrations caused by high loads or misalignment. In most high-load applications, P900 bearings perform more than 50 percent better than conventional bearings. In Figure 1, the bearings with the enhanced geometry, under certain conditions of load and misalignment, perform more than four times better than their standard counterpart.

Enhanced finishes

P900 bearings feature special finishes on the rollers, cups and cones to reduce surface-related modes of damage. This finishing process dramatically improves rolling contact surface finish and fatigue life when limited by surface distress and can add years to the relative life of a bearing. In design applications limited by surface distress, our finishing process can increase bearing life more than four times as shown in Figure 2.

Designed for your application

Timken engineers work with original equipment manufacturers to specify P900 bearings for the appropriate applications. To maintain the performance of these applications, you must replace a P900 bearing with a P900 bearing.

When replacing bearings, always order by part number to be sure you have the right bearing. If no part number is visible, contact your Timken sales representative for assistance.

Automotive TechTips

Maximizing bearing performance and life remains an objective throughout The Timken Company, from design teams and manufacturing associates to our field sales team and distributors. TechTips helps you install and maintain Timken® bearings, seals and components to maximize the life and performance of your bearings and the systems in which they operate. For more information regarding Timken automotive products and services, visit www.timken.com or contact your local Timken distributor.

PROPER TAPERED BEARING SETTINGS

The amount of end play or preload existing in a mounted pair of bearings is critical to performance. If incorrectly set, bearings may prematurely damage, and seals, brake components and tire operation may also be affected.

In addition, improper bearing setting can negatively impact factory settings of camber and toe. The Timken Company recommends installing all bearings to proper setting specifications to avoid issues.

Setting For Passenger Car Non-Driven Wheel

Several mounting methods for tapered single roller bearings exist, some are more common than others. One of the most popular methods is mounting and adjusting bearing setting with a bottle-cap stamping, hexagonal nut, cotter pin and threaded shaft (see Figure 1).

This approach is typically used on passenger car front wheels in conjunction with a hardened tongue washer between the outboard bearing's inner ring and the adjusting nut.

Figure 1: Passenger car non-driven wheel setting method

To adjust the setting of this bearing:

Step 1: Tighten the nut while turning the hub. When there is a slight bind on the bearing, the parts are seated correctly.

Step 2: Back the nut off 1/6 to 1/4 of a turn or sufficiently to allow .001" to .007" end play.

Note: Failure to back off adjusting nut could cause bearing to run hot and be damaged. Wheel could lock or separate.

Step 3: Place the bottle-cap-type stamping over the nut and insert the cotter pin to prevent the nut from backing off.

Setting For Independent Suspension Rear Axles

Hardened surface nuts, tongue washers and outerjam nuts or lock nuts are commonly used for wheels with full floating rear axles and some front-wheel applications (see Figure 2).

Figure 2: Independent suspension rear axle setting method

To adjust the setting of this bearing:

Step 1: Tighten the nut while turning the hub. When there is a slight bind on the bearing, the parts are seated correctly.

Step 2: Back the nut off 1/6 to 1/4 of a turn or sufficiently to allow .001" to .007" end play.

Note: Failure to back off adjusting nut could cause bearing to run hot and be damaged. Wheel could lock or separate.

Step 3: Tighten the jam nut to remove the thread clearance and to prevent the nut from backing off.

Proper bearing setting practices ensure maximum performance and life for bearings and all related wheel components. Contact your Timken sales representative or distributor with additional bearing setting questions.

Additional information regarding Timken bearings, seals and hub assemblies can be found at www.timken.com or by calling 1-800-223-1954 and asking for Aftermarket.

⚠ WARNING Failure to observe the following warnings could create a risk of serious injury.

Proper maintenance and handling procedures are critical. Always follow installation instructions and maintain proper lubrication.

Never spin a bearing with compressed air. The rollers may be forcefully expelled.

This information is not intended to substitute for the specific recommendations of your equipment suppliers.

TAPERED ROLLER BEARING DAMAGE ANALYSIS

The most common types of bearing damage that may result in a reduction of bearing or application life are often caused by:

- *insufficient maintenance practices*
- *mishandling*
- *improper installation and adjustment practices*
- *inadequate lubrication*

The following offers a quick reference to the common causes of bearing damage.

FATIGUE SPALLING

Geometric stress concentration: Spalling from misalignment, deflections or heavy loading.

Inclusion origin: Spalling from oxides or other hard inclusions in bearing steel.

Point surface origin: Spalling from debris or raised metal exceeding the lubricant film thickness.

FOREIGN MATERIAL

Abrasive wear: Fine abrasive particle contamination.

Bruising: Debris from other fatigued parts, inadequate sealing or poor maintenance.

Grooving: Large particle contamination embedding into soft cage material.

INADEQUATE LUBRICATION*

Roller end scoring: Metal-to-metal contact from breakdown of lubricant film.

Cone large rib face scoring: 'Welding' and heat damage from metal-to-metal contact.

Cone large rib face deformation: Metal flow from excessive heat generation.

Total bearing lock-up: Rollers

skew, slide sideways and lock-up bearing.

*** Excessive preload can cause damage similar to inadequate lubrication damage.**

CORROSION/ETCHING

Staining: Surface stain with no

significant corrosion from moisture exposure.

Etching: Rusting with pitting and corrosion

from moisture/water exposure.

Line spalling: Roller spaced

spalling from bearings operating after etching damage.

FALSE BRINELLING

Wear caused by vibration or relative axial movement between rollers and races.

HANDLING DAMAGE

Roller spaced nicking: Raised metal

on races from contact with roller edges.

Roller nicking/denting: Rough

handling or installation damage.

Cup-face denting: Indentations from hardened driver.

CAGE DAMAGE

Cage Deformation: Improperly installed or

dropped bearing.

Rollers binding and skewing: Cage

ring compressed during installation or interference during service.

MISALIGNMENT

Irregular roller path from deflection, inaccurate machining or wear of bearing seats.

PEELING

Micro-spalling due to thin lubricant film from high loads/low RPM or elevated temperatures.

HIGH SPOTS IN CUP SEATS

Localized spalling on the cup race from stress riser created by split housing pinch point.

IMPROPER FIT

Cone bore damage: Fractured cone due to

out-of-round or oversized shaft.

Cup spinning: Loose cup fit in a

rotating wheel hub.

EXCESSIVE PRELOAD OR OVERLOAD

Rapid and deep spalling caused by unusually high stresses. Full race width fatigue spalling is caused by heavy loads creating a thin lubricant film and elevated temperatures.

TRUE BRINELLING

Damage from shock or impact.

ELECTRIC CURRENT

Electric arc pitting: Small burns created by arcs from improper electric grounding while the bearing is stationary.

Fluting: Series of small axial burns

caused by electric current passing through the bearing while it is rotating.

EXCESSIVE END PLAY

Scalloping: Uneven localized wear

resulting from excessive end play.

Cage pocket wear: Heavy contact

between the rollers and cage pocket surfaces caused by bearing operating too loosely.

⚠ WARNING Failure to observe the following warnings could create a risk of serious injury.

Proper maintenance and handling procedures are critical. Always follow installation instructions and maintain proper lubrication.

Never spin a bearing with compressed air. The rollers may be forcefully expelled.

BALL BEARING DAMAGE ANALYSIS

The most common types of bearing damage that may result in a reduction of bearing or application life are often caused by:

- *insufficient maintenance practices*
- *mishandling*
- *improper installation and fitting practices*
- *inadequate lubrication*
- *excessive application loads*
- *contamination*

The following offers a quick reference to the common types/causes of bearing damage.

INADEQUATE LUBRICATION

Metal-to-metal contact from lubricant film breakdown resulting in a: 1) polished appearance on the inner race followed by an orange peel texture and, 2) raised edge on the thrust shoulder.

OVERLOAD

Softening and deformation of the thrust shoulder caused by excessive loads. The discoloration on the inner ring is the result of elevated temperatures.

IMPROPER INSTALLATION

Bearing supported by only one-third of its outer ring width within housing.

Irregular marks on the outer ring caused by improper seating in the housing.

Axial crack on inner ring due to oversized or out-of-round shaft.

Distorted seal due to interference with adjacent mating parts.

Loose inner ring fit on a rotating shaft resulting in discoloration from heat generation.

Inner ring cracking due to excessive taper on the shaft.

Seal damage due to improper installation procedure and/or tools.

CAGE DAMAGE

Metal cage damage due to misalignment or excessive speed.

Polymer cage damage due to improper installation procedure. The bearing seal was pressed into the cage.

⚠ WARNING Failure to observe the following warnings could create a risk of serious injury.

Proper maintenance and handling procedures are critical. Always follow installation instructions and maintain proper lubrication.

Never spin a bearing with compressed air. The rollers may be forcefully expelled.

This information is not intended to substitute for the specific recommendations of your equipment suppliers.

Every reasonable effort has been made to ensure the accuracy of the information contained in this writing, but no liability is accepted for errors, omissions or for any other reason.

Automotive TechTips

Maximizing bearing performance and life remains an objective throughout The Timken Company, from design teams and manufacturing associates to our field sales team and distributors. BALL BEARING DAMAGE ANALYSIS

The most common types of bearing damage that may result in a reduction of bearing or application life are often caused by:

- *insufficient maintenance practices*
- *mishandling*
- *improper installation and fitting practices*
- *inadequate lubrication*
- *excessive application loads*
- *contamination*

The following offers a quick reference to the common types/ causes of bearing damage.

FRETTING CORROSION

Fretting on inner ring due to out-of-round shaft.

Fretting on the outer ring due to out-of-round housing bore.

FOREIGN MATERIAL / CONTAMINATION

Fine particle abrasive wear on the inner race, commonly known as 'frosting'.

Gross contamination resulting from harsh operating conditions and/or seal failure.

Lubrication characteristics of the grease are compromised by water ingress.

FATIGUE SPALLING

Inclusion origin: spalling from oxides or other hard inclusions in bearing steel.

Geometric stress concentration (GSC): spalling from misalignment, system deflections or heavy loading.

Point surface origin (PSO): spalling from contamination in the ball path or raised metal exceeding the lubricant film thickness.

GREASE ETCHING

Chemical reaction of grease and moisture in a prolonged static condition resulting in pitting and corrosion. A 'witness mark' is generated at each ball location on the inner race.

TRUE BRINELLING

Damage from shock or excessive loads.

FALSE BRINELLING

Wear caused by vibration or axial movement between the balls and races in a static condition.

⚠ WARNING Failure to observe the following warnings could create a risk of serious injury.

Proper maintenance and handling procedures are critical. Always follow installation instructions and maintain proper lubrication.

Never spin a bearing with compressed air. The rollers may be forcefully expelled.

This information is not intended to substitute for the specific recommendations of your equipment suppliers.

Every reasonable effort has been made to ensure the accuracy of the information contained in this writing, but no liability is accepted for errors, omissions or for any other reason.

Gasket Maker

Permatex[®] High Strength Threadlocker RED

OEM specified. High strength threadlocker for heavy-duty applications 3/8 inch to 1 inch (10mm to 25mm). Especially well-suited for permanently locking studs and press fits. Adds 3,000 PSI holding power on slip and press fit assemblies. Replaces set screws and snap rings. Locks against vibration loosening. May require heat or special tools for removal.

Available in 1 ml individual pouches, 6 ml carded tubes, 36 ml carded bottles and 90 ml bottles. Large diameter threadlocker for bolts larger than 1 inch in diameter is available in 36 ml carded bottles. High temperature, high strength threadlockers suited for temperatures up to 450° F is available in 6 ml carded tubes, 10 ml carded bottles and 36 ml carded bottles. High temperature, permanent strength threadlocker for high vibration and heavy shock applications is available in 6 ml carded tubes and 36 ml carded bottles.

Permatex[®] Medium Strength Threadlocker BLUE

OEM specified. All-purpose, medium strength threadlocker. Ideal for all nut and bolt applications 1/4" to 3/4" (6mm to 20mm). Eliminates need for stocking expensive lock nuts and lock washers. Locks and seals while preventing parts loosening due to vibration. Protects threads from corrosion. Removable with hand tools for easy disassembly.

Available in 1 ml individual pouches, 2.5 ml carded bottles, 6 ml carded tubes, 36 ml carded bottles and 90 ml bottles.

Permatex[®] Low Strength Threadlocker PURPLE

OEM specified. Low strength threadlocker designed for fasteners under 1/4" (6mm) that require occasional adjustment. Removable with hand tools for easy disassembly. Noncorrosive. Conforms to ASTM D 5363 AN0311 (Mil-S-46163A, Type II, Grade M).

Available in 6 ml carded tubes

Gasket Maker

Permatex® Anaerobic Gasket Maker

OEM specified. Noncorrosive gasketing material designed primarily for use on aluminum, iron, and steel flanged mating surfaces. Ideal for on-the-spot and emergency repairs, or when a conventional gasket is unavailable. Fills gaps up to .015" and cures to a solvent-resistant seal that will not tear or decay during service. Parts disassemble easily even after extended service and old gasket material can be removed in minutes with a simple putty knife.

Available in 6 ml carded tubes, 50 ml carded tubes and 300 ml cartridges

Permatex® Ultra Blue® Multipurpose RTV Silicone Gasket Maker

OEM specified. Permatex® Ultra silicones were developed to meet today's technology changes. Sensor-safe, low odor, noncorrosive. Outstanding oil resistance and joint movement values. Eight times more flexible than cork/composite gaskets; three times more oil resistant than conventional silicones. Temperature range -65°F to 500°F (-54°C to 260°C) intermittent; resists auto and shop fluids and vibration.

Available in 3.35 oz carded tubes, 9.5 oz Powerbead cans and 13 oz cartridges

Permatex® Ultra Black® Maximum Oil Resistance RTV Silicone Gasket Maker

OEM specified. For dealership warranty requirements, ensures extended drivetrain warranty compliance. Fast-curing formula. Sensor safe, low odor, noncorrosive. Meets performance specs of OE silicone gaskets. Retains high flexibility, oil resistance properties through use of a patented adhesion system. Temperature range -65°F to 500°F (-54°C to 260°C) intermittent; resists auto and shop fluids and vibration.

Available in 3.35 oz carded tubes, 8.75 oz Automatic Tubes, 9.5 oz Powerbead cans and 13 oz cartridges

Gasket Maker

Permatex[®] Ultra Grey[®] Rigid High-Torque RTV Silicone Gasket Maker

OEM specified. Designed specially for high-torque and high vibration applications, like those common in import engines, this premium RTV gasket maker exceeds manufacturers' performance requirements. Noncorrosive and low-odor. Maximum vibration resistance, with outstanding resistance to oils, cooling and shop fluids. Guaranteed not to leak. Temperature range -65°F to 500°F (-54°C to 260°C) intermittent.

Available in 3.35 oz carded tubes, 9.5 oz Powerbead cans and 13 oz cartridges

Permatex[®] High-Temp Red RTV Silicone Gasket

OEM specified. Formulated for hi-temp applications, or heavy-duty use (such as towing, etc.). Replaces almost any cut gasket by making reliable "formed-in-place" gaskets that resist cracking, shrinking and migrating caused by thermal cycling. Coats pre-cut gaskets to increase reliability. Temperature range -65°F to 650°F (-54°C to 343°C) intermittent; resists auto and shop fluids. First generation 1970-1980 gasket maker.

Available in 3 oz carded tubes, 7.25 oz Automatic Tubes, 7.25 oz Powerbead cans and 11 oz cartridges

Permatex[®] the Right Stuff[®] Gasket Maker

Return equipment to service immediately when you make leak-proof gaskets in just one minute with the Right Stuff.[®] This latest elastomeric rubber gasket technology is blowout resistant and outperforms pre-cut gaskets. Specified on production lines by GM, Ford, DaimlerChrysler and Mercedes-Benz. Temperature range -75°F to 450°F (-59°C to 232°C) continuous, 500°F (260°C) intermittent.; resists ATF, coolant, oil and other shop fluids. Protects against leaks caused by vibration and thermal expansion. Sensor-safe

Available in 4 & 7 oz Automatic Tubes, 7.5 oz Powerbead cans and 5 & 10.1 oz cartridges

Gasket Maker

Permatex® Bearing Mount for Close Fits

OEM specified. A low viscosity, rapid-curing anaerobic adhesive that augments the strength of press fit assemblies or slip fit assemblies up to .005" in diameter. Adds up to 3,000 PSI holding power.

Available in 36 ml carded bottles

Permatex® Bearing Mount for Relaxed Fits

OEM specified. High strength, medium viscosity anaerobic adhesive for slip fit assemblies. Provides 2,800 PSI shear strength on steel. Fixes in 10 minutes at room temperature.

Available in 36 ml carded bottles

Permatex® High Temperature Sleeve Retainer

OEM specified. High temperature (up to 400°F / 204°C) anaerobic adhesive that secures slip and press fit assemblies. Adds up to 3,000 PSI holding power. Restores fit to worn or out-of-tolerance assemblies. Prevents surface corrosion.

Available in 6 ml carded tubes and 36 ml carded bottles

Permatex® Prussian Blue

Aids precision-fitting of machined surfaces. Locates high spots on bearings, valves, gears and other close-to-tolerance components. Nondrying. Easy clean-up.

Available in .75 oz tubes

Permatex® Anaerobic Flange Sealant

Flexible, gasketing material for use on rigid machined flanges with less than .015" gap. OEM approved – use where OE's specify "anaerobic" gasket (cures in the absence of air). Withstands temperatures to 300°F (149°C). Eliminates preformed, pre-cut, paper, rubber and cork gaskets. Flexes with flanges that move in service.

Available in 50 ml carded tubes and 300 ml cartridges

Permatex® High Temperature Anaerobic Flange Sealant

A high temperature sealant specially engineered for making or dressing gaskets in rigid assemblies. Able to withstand temperatures to 400°F (204°C), fills gaps up to 0.020" (primed) and permits clamping loads to be maintained for strong, leakproof assemblies.

Available in 50 ml carded tubes

Notes

Limited Warranty

Merchandise purchased from NORTH COAST BEARINGS, LLC (“NCB”) is warranted against defects in material and workmanship for a period expiring one (1) year after purchase from NCB by the original purchaser, which purchase date is set forth on NCB invoice. If a breach of this warranty, then NCB shall, at NCB’s option, either replace the defective merchandise or refund in full, without interest or abatement, the purchase price actually paid by the original purchaser to NCB. In order to avail itself of relief from NCB under this warranty, the claimant must return the defective merchandise at claimant’s own cost and expense to NCB, and NCB shall be entitled to make its own inspection to determine whether the warranty claim is valid. NCB shall have no responsibility in the event that written notice of such claim is not made within the one (1) year period aforesaid; nor shall NCB be responsible for labor charges involved in the replacement of any merchandise. NCB shall not be liable in the event of alteration, misuse, overload, negligence or damage caused by others or if the merchandise shall have been damaged by flood, fire or other events not within its control.

THIS EXCLUSIVE WARRANTY IS EXPRESSLY MADE IN PLACE OF AND IS SUPERIOR TO ANY AND ALL OTHER WARRANTIES OF ANY NATURE WHATSOEVER, INCLUDING IMPLIED WARRANTIES, WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE, AND OF ALL OTHER OBLIGATIONS IN CONNECTION WITH THE SALE OF THE MERCHANDISE BY NORTH COAST BEARINGS UNDER NO CIRCUMSTANCES SHALL NORTH COAST BEARINGS BE LIABLE TO THE PURCHASER OR ANY OTHER PARTY FOR LOSS OF PROFIT, INCIDENTAL OR CONSEQUENTIAL DAMAGES OF ANY TYPE.
