GM 126/226 Updated Transfer Case Shift Lever and Bearing

DT Components are now offering the updated shift lever bearing and shift lever for the GM 126/226 transfer case. This updated bearing and shift lever offers improved durability over the original design. If you are replacing the old design bearing with the new design, you must also replace the shift lever as the new bearing will not work with the old design shift lever. The ZN1222 is included in the TCRK-226 rebuild kit. Please contact your sales representative for pricing information.
